PROFILE

Software engineer who studied at Asia Pacific University (BSc (Hons) Software Engineering, dual award with De Montfort University, 2024 – 2026). I build full-stack web systems on relational databases, most recently a Django and Next.js aquarium marketplace with a WebGPU 3D tank builder. Industry experience in enterprise IT support and APAC-wide Power BI reporting at DHL Supply Chain. I use AI coding tools (Claude, ChatGPT, Gemini) to work faster. Looking for a software engineering role building scalable web applications.

TECHNICAL SKILLS

Languages: PHP, JavaScript, TypeScript, Python, Java, C++, Dart, SQL, HTML, CSS
Web & Frameworks: Django, React, Next.js, Node.js, Express.js, three.js, Bootstrap, REST APIs, MVC
Data & ML: MySQL, PostgreSQL, Supabase, TensorFlow, Keras, scikit-learn
Cloud & Tools: AWS (Elastic Beanstalk, RDS), Vercel, Git, GitHub, Power BI, Figma, Microsoft MFA
Engineering: OOP, Database Design, RBAC, Authentication, API Development

SELECTED PROJECTS

AkuaVerse - Aquarium Marketplace with a 3D Tank Builder

Personal project, in progress | Python • Django • PostgreSQL • Next.js • TypeScript • three.js

- Follow-on to LWICMS: a marketplace where Malaysian aquarium shops list stock and hobbyists plan a tank before buying, in a to-scale editor that checks water volume and fish compatibility.
- Added a 3D view in three.js on WebGPU (WebGL 2 fallback) with rendered water, caustics, flow particles and free camera orbit.
- Django REST API validates every saved tank layout on the server; the plan turns into a shopping list linked to shop stock.

Live Web-Based Inventory & Customer Management System (LWICMS)

Final Year Project | PHP • MySQL • JavaScript • Bootstrap • Supabase

- Built a multi-tenant platform for ornamental fish retailers and breeders to manage inventory, sales, mortality, procurement and customer-facing availability.
- Implemented tank-level stock updated inside database transactions, with low and out-of-stock tracking from sales and mortality events.
- Engineered a Tank Compatibility Engine and Aquarium Builder, and role-based workflows (RBAC) for five user roles in English and Chinese.

RescueNet - Disaster Relief Management System

Cloud Architecture Project, team of 4 | React • Node.js • Express.js • PostgreSQL • AWS

- Built the volunteer module of a disaster relief platform: dashboard with shelter and supply alerts, victim registration, resource requests and task tracking.
- Kept shelter headcounts consistent by updating victim status and occupancy in a single transaction.
- Worked in a layered controller/service backend deployed on AWS Elastic Beanstalk with Amazon RDS, using Git branching across the team.

EXPERIENCE

IT Intern - DHL Supply Chain Sdn. Bhd.

Jul 2025 - Nov 2025 | Shah Alam

- Built a standardised Power BI dashboard for DHL warehouses across APAC so every site reports operations consistently; studied which KPIs matter most to workers and operators, and presented it to regional teams.
- Deployed laptops and desktops, supported onboarding, and troubleshot printers, RF scanners and warehouse Wi-Fi, including access point configuration.
- Supported Microsoft MFA adoption and enterprise IT security practices.

Website Developer Intern - Brandvibe

May 2024 - Jul 2024

- Developed business websites using Wix and Velo, created Figma prototypes, and adapted designs to client requirements.

EDUCATION

Asia Pacific University of Technology & Innovation

Sep 2024 - Sep 2026

BSc (Hons) Software Engineering, dual award with De Montfort University | CGPA 3.11

Asia Pacific University of Technology & Innovation

Apr 2022 - May 2024

Diploma in Information Technology (Software Engineering) | CGPA 3.20

ACHIEVEMENTS

- 1st Place - Setia Alam Aquascaping Competition, Aquarium Design
- IAPLC 2024 - International Aquatic Plant Layout Contest, world rank #337
